LaTeX Workshop Exercises

December 2020

Install instructions

Overleaf is an online LaTeX editor, which can be found on:

www.overleaf.com

Alternatively, you can install Texlive.

```
sudo apt-get install texlive
```

1 Preamble

In latex the package that you use and the document wide setting are placed in the preamble

- a) Add the document class article.
- b) Add the package graphicx.
- c) Add meta data for a title, author and date (the command `\today` gets the current date).

2 Content

- a) Add the document environment.
- b) Add a title to the document.
- c) Create a numbered section named "Formatting".
- d) Go to the link <http://randomtextgenerator.com/> and copy the random text in your section.
- e) Format atleast one sentence to bold, one sentence to italic and change the size of two sentences.

3 Lists and references

- a) Create a section named "Lists".
- b) Create a numbered list and write a sentence in the first item.
- c) After the list add a reference to the first item made in question b.

Cover

4 Floats

- Create a new section named “Floats”
- Create an image float.
- Add a caption to the image.
- Add a label to the image.
- Restrict the float to the Floats section.

5 Tables

Create a table with containing a finished tic-tac-toe with a label and caption.

6 Mathematics

The link <https://en.wikibooks.org/wiki/LaTeX/Mathematics> contains a large overview of symbols that can be used in equations.

- Create a new section named “Math”.
- Add the package “mathtools”.
- Create an in-line math statement which prints to $e = mc^2$.
- Create a math equation math environment which prints these equations:

$$x = \frac{2 \times \sqrt{a}}{2}$$
$$a = 2\pi$$

- Write a two (or more) line math statement where the = are aligned with each other. For example:

$$\begin{array}{ll} f(0) = 0 & (1) \\ f(1) = 1 & (2) \\ f(x) = f(x-2) + f(x-1) & (3) \end{array}$$

This can be done with an “align*” environment.

7 BibTeX

- Go to <http://scholar.google.com> and search for any paper, e.g. “BibTeX”.
- Obtain at least two BibTeX references and save them into one file under the .bib extension.
- Cite your references using the numeric style, which can be done using `unsrt` in bibliography style. For an example, see www.bibtex.org/using

[PDF] Designing BIBTEX styles

O Patashnik - 1988 - php.mirror.ac.za

This document starts (and ends) with Section 5, because in reality it is the final section of "BIBTEXing"[4], the general documentation for **BIBTEX**. But that document was meant for all **BIBTEX** users, while this one is just for style designers, so the two are physically separate.
