

LATEX Workshop

Exercises

May 12, 2026

Install instructions

Overleaf is an online LaTeX editor, which can be found on:

www.overleaf.com

First, create a new project on Overleaf in a new tab. Alternatively, copy this project (File → Make a copy) and create a new `.tex` file.

1 Preamble

In $\text{\LaTeX}$, the packages you use and document-wide settings are placed in the preamble.

- a) Add the document class `article`.
- b) Add the package `graphicx`.
- c) Add metadata for a title, author and date (the command `\today` gets the current date).

2 Content

- a) Add the document environment.
- b) Add a title to the document.
- c) Create a numbered section named “Formatting”.
- d) Go to the link <http://randomtextgenerator.com/> and copy the random text in your section.
- e) Format atleast one sentence to bold, one sentence to italic and change the size of two sentences.

3 Lists and references

- a) Create a section named “Lists”.
- b) Create a numbered list and write a sentence in the first item.
- c) After the list add a reference to the first item made in b).

4 Floats

- a) Create a new section named “Floats”
- b) Create an image float.
- c) Add a caption to the image.
- d) Add a label to the image.
- e) Restrict the float to the Floats section.

5 Tables

Create a table with containing a finished tic-tac-toe with a label and caption.

6 Chemistry in TeX

Chemistry writing needs consistent notation for formulas, reactions, units, and references.

- a) Create a new section named “Chemistry in TeX”.
- b) Add the package “mhchem”.
- c) Add the package “siunitx”.
- d) Create chemical notation for a formula, an ion, and a reaction using `\ce`.
- e) Create quantities with units using `\SI` and a number using `\num`.
- f) Put a reaction scheme, spectrum, or table in a float with a caption and label so it can be referenced later.

7 BibTeX

1. Go to `http://scholar.google.com` and search for any paper, e.g. “BibTeX”.
2. Obtain at least two BibTeX references and save them into one file under the `.bib` extension.
3. Cite your references using the numeric style, which can be done using `unsrt` in bibliography style. For an example, see `www.bibtex.org/using`
